

SafeBase™

The Simple, Low-Cost way to safeguard your Chip & PIN Terminal

Your Chip & PIN device is an essential part of your business; it is a significant investment so you want it to be available and working for as long as possible ...

However, fraudsters target these devices to obtain PIN numbers, and they are sometimes used by customers to express their anger, putting staff at risk ...

By mounting your Chip & PIN device on a secure stand all of these issues can be addressed, at the same time ensuring you have maximum counter space for marketing and efficient customer service. Once mounted on a SafeBase and secured by lock and key your Chip & PIN device can never be dropped or thrown, its cables won't get twisted and it won't get stolen. With SafeBase you maximise operating life, minimise downtime and vastly reduce the possibility of abuse and theft ...

SafeBase

- Supports all common Chip & PIN Devices
- No need to replace SafeBase when you replace your Chip & PIN Device
- Field upgradeable
- Increases lifespan of Chip and PIN Devices (less wear and tear; reduced false tampers)
- Robust and durable construction
- Tilt and swivel action
- Screw or strong adhesive base fixing
- Also available as a Countertop 'shoe' (no pole/mounting)

Keylock Options

- Random key lock per unit
- Same lock per store
- Same lock across estate
- Exclusivity on locks available

Optional Adaptor Pole

- Upgrade existing mounting solutions via an adaptor piece, PoleMate, to take advantage of SafeBase functionality ...

Cable Management

- Through centre of pole or multi-cable clip option

One Pole, One Base, ALL Card Terminals

SafeBase™

SafeBase is the ideal location to display promotional material; it is right at the Point of Sale ... From brand building to tactical advertising (for example special offers) Tailwind can supply customised collateral to support your Sales and Marketing programmes ...

The Transition To Contactless Payment ...

With your Chip and PIN Terminal secured on SafeBase the possibilities for adding new Technology Modules is unlimited; for example, when you decide it's time to accept Contactless Card or Mobile Phone based Payments by far the most cost-effective and simple option is to *add* a Contactless Card Reader to your existing Chip and PIN Device via SafeBase ... This provides a single Point of Interaction for the Cardholder and minimises the use of valuable counter space ...

- **TAP-IT**

Tailwind's custom Technology Module is designed to accommodate Technology from the leading Contactless Card Reading vendors; it can be easily added to a SafeBase to deliver instant payment capability by Contactless Card or NFC enabled Mobile Phone ...

- **VIVOTECH 4500**

As an alternative to Tap-It Tailwind has developed a custom holster, which attaches to the SafeBase and houses this global best – selling, standalone Contactless Card Reader ...

Tailwind is actively developing other Technology Modules that can be added to SafeBase ...

SafeBase ... Counter Intelligence from Tailwind
